

Most simulators are inanimate or virtual - limited in their use or expensive!

Fully functional take home endoscopic trainer which provides a realistic simulated laparoscopic platform. It provides the perfect image without the need for a light source. The **Laprotrain** may be used with or without an assistant surgeon as the 'scope may be fixed or mobile in a moment'.

This trainer works. It comes with a video of step by step training exercises to take a complete novice to a competent technical level in a few months.

Key Features
